Tables Data Description

The book contains many tables and figures based of raw data or summary statistics. We have made many of these data sets available so that instructors and students can repeat the analyses we report in the book, and can perform additional analyses that they may find interesting.

These tables should provide a rich source of data for additional exercises that instructors can generate for their classes, and should be useful to students for testing their understanding of the analyses.

Most of the table names are the same as in the text: For example, "Table 17_1 nested data" is based on Table 17.1 in Chapter 17. A few, such as "GSR2 data" provide the data used in a figure.
